

This response was submitted to the call for evidence by the Nuffield Council on Bioethics on *Emerging techniques to prevent inherited mitochondrial disorders: ethical issues* between January 2012 and February 2012. The views expressed are solely those of the respondent(s) and not those of the Council.

Margaret EVANS.

12-2-2012.

Dear Sir, Madam.

as a Person who suffers daily from a Mitochondrial Problem.

I certainly agree with any form of research.

For this Problem. From Conception to later life
In my youth if more was known about this disease
I certainly would have not had a child.

My daughter of 36 yrs has now begging to suffer
Fatigue, hypomas. ect. exactly as I was.

I would as any Parent faced with this Problem.
would give Permission for any Help and Research
available.

If it was not for Profb Turnbull & Colleagues.
I would be, & my Sisters and offspring in the dark
on this Problem.

I give & pray that all that's available be given
every possible funding & Research. for young
Babies & children not to suffer as I have

Sorry if you don't understand me
my mind & concentration is not good today.

I wish you all good luck
& Best Wishes

yours faithfully.

m Evans.
